

BILL GATES - THE FIRST TECHNOLOGY THAT HAS NO LIMIT

*We
develop a passion
for Teaching!*

INFINITY PODCASTS 1397

>> stephen: hey, everybody.
we are back with bill gates.
you have a new netflix
docuseries that's called
"what's

next, the future with
bill gates" in one episode that
fascinated me was you talk to
bernie sanders.

bernie sanders does not say
great things about the fact that
there are billionaires.

he does not believe that there
is any reason that there should
be billionaires.

how do you --
some people agree with him
right

here.

what is it like hanging with
bernie for you?

>> well, he is kind of
predictable, you know, he
wishes

we were rich enough that we
could be more generous.
and so you know, how do you
raise that revenue without
destroying the capitalistic
system that makes the u.s. the
envy of the world.

for that episode on inequality,
i talked to mitt romney, i
talked to bernie sanders.

i get these different
viewpoints.

i told him that i would make
the
tax system more progressive.
i would've paid twice as much
in
billionaire.

so he would get rid of 99% of
my
money.

i would only get rid of 50% of
it.

>> stephen: but 99% of your
money, you would still be a
multibillionaire.

\$138 billion, i can do the
math.

>> bill: if you get rid of
99%, i would have \$1.3

billion.

>> stephen: i am so sorry.

[laughter]

i would not want anyone to
have

only \$1.3 billion.

are we talking mark cuban
money
here.

love you, mark.

do you think i would enjoy
being

a billionaire?

>> bill: yes.

>> stephen: you think i would
enjoy it?

i am telling you for the low,
low price of \$1 billion i am

willing to disagree with
bernie sanders right here.
what's the best thing about
being a billionaire?

>> bill: two things.

one is that you don't have to
worry.

you can send your kids to any
school.

you are not going to have any
problems, and if you are
charitably minded, then you
can

pick things you believe in,
malnutrition, whatever it is
you

want to work on and you can
be

incredibly generous and help.

[applause]

>> stephen: you are planning
on giving most of the money
away?

you and a bunch of other
billionaires have this charity
pledge that you signed.
what is the pledge say?

>> bill: it's called the
giving pledge, i have
committed
to give over 95% of my
money
away to join the pledge you
only
have to commit to give the
majority away.

>> stephen: 51% and above.

>> bill: that's it.

it's been on a lot of people are concerned about the rising ai, doesn't frighten you?

>> bill: somewhat.

>> stephen: what worries you?

a robot overlord, or the fact that we will get intellectually lazy, and it will stop because we are outsourcing to a machine?

>> bill: it is the first technology that has no limit. when you invent a tracker or cell phone, you figure out, okay, we can figure out how

that's going to change life.
here where the ai is very
intelligent and when you put a
robotic formula, it can do a
lot
a blue-collar and white-collar
jobs, the fact that that is
happening over the next
decade,
the idea of doing really trust
government to adjust the tax
policies and make sure that
okay, we are shortening the
work
week, so that it is happening
very fast and it is unlimited.
a lot of it is super good.
like, you know, inner-city

personal tutors for all of the
kids.

great health care, even in poor
countries.

so the good stuff, which
maybe
gets crowded out by these
fears,

that's so exciting.

>> stephen: that's not a
personal relationship.

it is ai that reminds me of the
cruel experiences with the
baby

monkeys that had a bottle
wrapped up in carpet to
simulate

mommy and i'll bottle on a

wire
frame, and they got food, but
the wireframe monkeys died
from
the lack of warmth from the
physical mother.
an ai teacher is not a human
being who can perceive my
needs.
and even though there is no
bedside manner, isn't there a
little bit of a danger there?
>> bill: probably not.
[laughs]
>> stephen: i had examples.
you just said "no."
[applause]
>> bill: the ideal for

learning is to have a personal
tutor who understands your
motivation, who is seeing
what
you are getting right and
wrong,
and the ai can learn from the
very best personal tutors.
until you use this stuff, it is
pretty surprising.
it was two years ago when i
first saw this chatgpt and it
was kind of mind-blowing,
because it came all of a
sudden.
and yes, its ability to learn
from the best and provide
advice.

and be there 24 hours a day,
have your mental health
adviser

24 hours a day, your personal
tutor meet and give you
feedback, it is -- there's been
a lot of science movies like
"her" where you really are
connected.

>> stephen: thanks so much
for
stopping by and your efforts
to

make it a better planet!
you can read the 2024
"goalkeepers" report
on the bill and melinda gates
foundation website.

bill gates, everybody.
we'll be right back with jane
goodall.
[cheers and applause]
